ALDD/057 Review April 2007

With acknowledgement to:
Newcastle-under-Lyme PCT

Having an EEG

A doctor may ask for a test to see what is happening inside your head

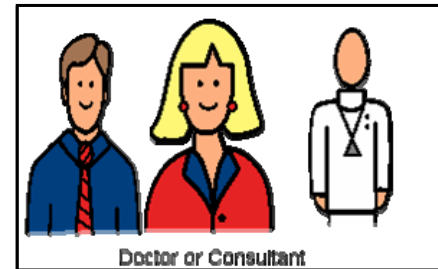

It will help the doctor to see if you have epilepsy

It can done at the hospital, or your day centre or your home

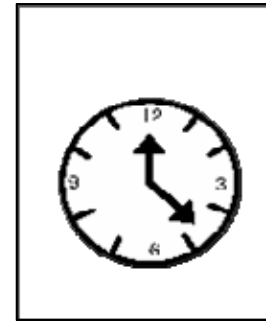

After the test you can wash the paste from your hair

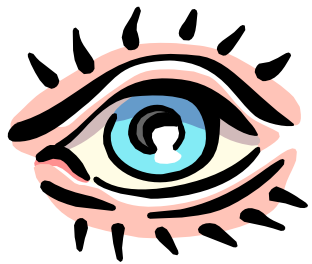

The doctor will explain the results to you later

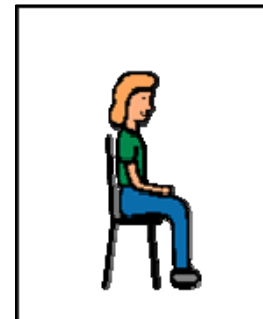

The nurse will start the test it will not hurt

The nurse will explain how long the test will take

You may be asked to open & close your eyes

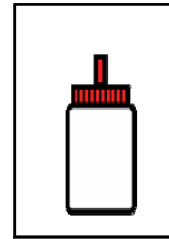

You will be asked to sit down

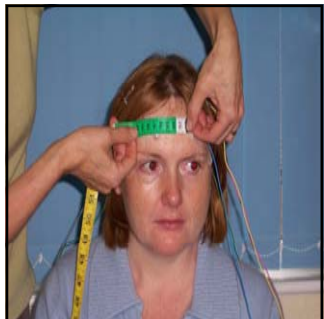

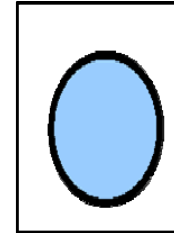

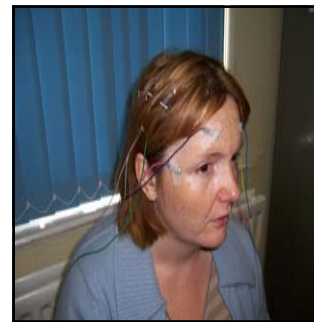

The Nurse will show you the machine

Small discs are put on your head with paste

Your head will be measured. This will not hurt

Keep the discs on your head
