SYPHILIS

Syphia Bacteria	Syphilis is an infection caused by bacteria
my (kd)	Syphilis is usually caught by touching the private parts of someone who has the infection, then touching yourself
	It can also be passed on when having sex or oral sex
	Some people have no symptoms but can still pass on the infection Other people may develop sores on their private parts
	Syphilis is treated with injections of antibiotics
PH/LH BODYWISE 2010	Condoms can reduce the risk of transmission. Speak to your doctor or nurse about treatments and more information
