

## What happens if I have Chlamydia?

If the test finds you have Chlamydia you will be given antibiotics to treat it.

Take the 4 antibiotic tablets together.

You must not have sex for 7 days.

It is important that we know who else you have had sex with so they can be tested too.

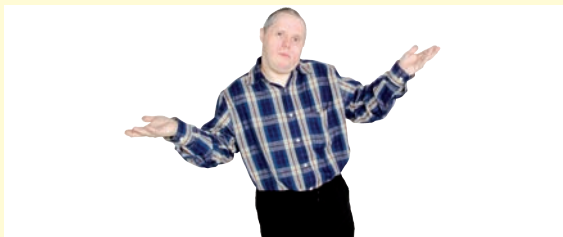

A health worker will contact you 2 or 3 weeks after you have finished the antibiotics.

## Chlamydia information for men

## What is Chlamydia?

Chlamydia is an infection that can be passed from one person to another during sex.

Men and women can both get Chlamydia.

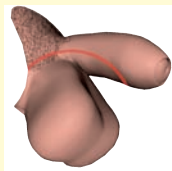

Chlamydia is hard to see. Sometimes there are no signs.

You may not know you have it!

Some men with Chlamydia have pain in their tummy below their belly button

**or** pain when peeing or having sex

**or** pain in their testicles (balls).

## How will I know if I have Chlamydia?

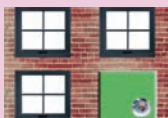

Your pee can be tested.

You should go to your GP surgery

**or** to make an appointment phone 01872 255044

**or** go to the GU Clinic (see GU clinic leaflet).

You will be given a pee pot. Go to the toilet and pee in the pot until it is half full.

Screw the lid on tightly.

Give the pee pot to the nurse or health worker.

You will get your results by phone

**or** letter.
